CAPABILITY STATEMENT

Comprehensive Care Continuum Solutions, LLC

Healthcare operations and workforce · Clinical intelligence · Secure health technology · Responsible AI

UEI: **UDUEKNADXNG8**	CAGE: **246J0**	SAM.gov **Active**	Primary NAICS: **541611**

COMPANY OVERVIEW

Comprehensive Care Continuum Solutions, LLC (CCCS) is a joint venture between ARVELLIS, LLC and HealthCare Resolution Services, Inc. CCCS brings together healthcare operations, workforce support, clinical expertise, and secure technology to help organizations strengthen care delivery across the continuum. We combine HCRS's established healthcare program delivery experience with ARVELLIS's physician-led clinical intelligence, cybersecurity, and Responsible AI capabilities to address needs spanning people, processes, clinical decisions, and technology.

What the joint company adds. CCCS brings complementary capabilities into one delivery approach. Healthcare operations and workforce support help programs deliver services; clinical expertise and actionable intelligence help care teams interpret information and assess appropriate next steps; secure technology and governance support implementation. Together, these capabilities help customers address gaps that cross operational, clinical, and technical responsibilities while building sustainable capacity.

CORE CAPABILITIES

Healthcare operations and virtual care

- Healthcare staffing, credentialing, onboarding, care coordination, and quality support
- RPM and RTM support, chronic disease management, transitional care, and patient education
- Medication and treatment-plan follow-up plus workforce capacity development

Physician-led clinical intelligence

- Modular Physician Intelligence Engine for existing engagement, care-management, RPM, telehealth, or data systems
- Structured, disease-specific question responses, supplemented by available clinical and monitoring data, to identify changes from baseline and support clinical prioritization
- Physician review of concerning changes with findings communicated to the treating provider

Health IT modernization and cybersecurity

- Healthcare cybersecurity, privacy, GRC, continuity, resilience, and vendor-risk assessments
- Secure interoperability, HIE and EHR workflow support, and technology governance
- ISO 27001-aligned security management and modernization support

Healthcare Responsible AI

- AI readiness and governance assessments aligned with ISO 42001 principles
- AI inventories, use-case and risk classification, policies, accountability, and lifecycle monitoring
- Healthcare-specific workforce and leadership training with privacy, security, safety, and clinical oversight in view

HOW THE PHYSICIAN INTELLIGENCE ENGINE (PIE) WORKS

1. **Disease-specific patient questions**
2. **Change from baseline identified**
3. **Physician review and prioritization**
4. **Treating provider informed**

FLEXIBLE AND MODULAR DELIVERY

CCCS scopes each engagement around the customer's needs, existing capabilities, and partners. A joint engagement may combine healthcare operations, workforce support, virtual care, clinical intelligence, secure technology, and AI governance. Services can be delivered together or as targeted components within an existing program. The Physician Intelligence Engine (PIE), for example, can add clinical intelligence to established patient engagement, care management, RPM, or telehealth infrastructure.

TARGET CUSTOMERS AND PARTNERS

Federal and territorial healthcare agencies · **Military health organizations** · **Health systems and hospitals**

FQHCs and community health organizations · **Medicaid and risk-bearing organizations** · **Value-based care organizations**

Health information exchanges · **Digital health organizations** · **Prime contractors requiring specialized healthcare capabilities**

FEDERAL HEALTHCARE EXPERIENCE

HealthCare Resolution Services

Nearly 30 years of healthcare operations, including staffing support at more than 50 VA medical centers and work supporting CDC, AHRQ, CMS, Army, Navy, and Air Force programs; medical coding, auditing, health-data abstraction, training, research, and administrative operations.

ARVELLIS

Physician leadership in family medicine, federal healthcare operations, utilization management, chronic disease support, clinical workflow, healthcare cybersecurity and GRC, AI governance, and development of modular physician-led clinical-intelligence capabilities.

KEY DIFFERENTIATORS

- Combined healthcare operations, workforce support, clinical expertise, and technology governance within one delivery approach
- Ability to connect program delivery and patient information with actionable intelligence for care teams and healthcare leaders
- Modular delivery that builds on existing systems, vendors, and workforce
- Clinical oversight, healthcare cybersecurity, GRC, and Responsible AI governance integrated with implementation
- Established federal and military healthcare experience
- Capacity-building approach that includes training and knowledge transfer

USVI AND TERRITORIAL ENGAGEMENT APPROACH

CCCS begins with the need, not a predetermined product. We work with local providers, hospitals, government agencies, community organizations, and workforce partners to identify existing initiatives, current partners, capability gaps, and sustainable funding or reimbursement. An initial engagement may be structured as a focused pilot with defined measures for patient engagement, timely follow-up, clinical escalation, workforce impact, and service quality.

> **Our guiding principle** is to strengthen, integrate, secure, govern, or extend what is already underway while building sustainable local capacity.
